PROFESSIONAL SUMMARY

AI Engineering Intern at Reliance Industries Limited, building FastAPI and React systems integrated with LLMs (Llama 3, Qwen) for production KPI reporting. Skilled in backend engineering and Retrieval-Augmented Generation, with hands-on experience shipping applied-AI features end to end. Seeking a Software Engineering / AI Engineering internship to build production-grade systems.

EDUCATION

Birla Vishvakarma Mahavidyalaya (BVM), Anand

2024 – 2028

Bachelor of Technology in Computer Engineering

TECHNICAL SKILLS

Programming: Python, Java, C++, C, JavaScript, TypeScript

AI/LLM: LLMs, RAG, LangChain, LangGraph, Prompt Engineering, Ollama, Hugging Face, FAISS

Backend: FastAPI, Node.js, REST APIs, Authentication

Frontend: React, HTML, CSS

Databases: PostgreSQL, Vector Databases (FAISS)

Tools: Git, GitHub, Linux, VS Code, Microsoft Azure

INTERNSHIP EXPERIENCE

Reliance Industries Limited (RIL)

May – June 2026

AI Engineering Intern

Vadodara, India

Project: AI Agents for Plant Performance Monitoring

- Engineered a no-code AI agent configuration platform (FastAPI, React) that let plant engineers launch custom LLM-driven KPI reporting agents, cutting agent setup time from hours to minutes.
- Integrated Llama 3 and Qwen models via Ollama with structured prompt engineering to auto-generate natural-language KPI reports from operational data.
- Built REST APIs and scheduled jobs with APScheduler to automate recurring KPI report generation and SMTP-based distribution to 50+ stakeholders.
- Eliminated manual report compilation and distribution by automating the end-to-end reporting workflow from data pull to stakeholder delivery.
- Delivered a working enterprise LLM reporting tool into production within a 6-week internship timeline.

PROJECTS

MarketAI – AI-Powered Financial Intelligence Platform | *Python, LangChain, RAG, LLMs*

- Built an LLM-powered financial analysis engine in LangChain that ingests market data and news sources to generate real-time summaries for analysts.
- Grounded model outputs in verifiable financial documents using Retrieval-Augmented Generation, reducing hallucinated claims in generated insights.
- Designed prompt templates and context-window management strategies to balance output accuracy against latency and token cost.

Self-Healing RAG System | *Java, Python, FastAPI, LangChain, LangGraph, FAISS*

- Architected a retrieval-augmented generation backend in FastAPI with modular document ingestion, embedding generation, and FAISS vector store infrastructure for scalable semantic search.
- Designed a self-healing retrieval engine in LangGraph that detects low-confidence or failed queries and automatically re-ranks or re-queries results without manual intervention.
- Decoupled the retrieval endpoint from the ingestion pipeline, enabling independent horizontal scaling of each workload.

Dhodia Community Vadodara Website | *React, CSS*

- Built a responsive community website in React for Dhodia Samaj Vadodara, centralizing access to announcements, events, and member information.
- Implemented a mobile-first, accessible UI to ensure consistent usability across devices for a non-technical community user base.
- Structured reusable UI components to simplify future content updates and reduce ongoing maintenance effort.

CERTIFICATIONS & EXTRACURRICULAR

- NPTEL Elite Gold Certification – Business Fundamentals for Entrepreneurs
- Graphic Designer | CSI Student Chapter, BVM
